

Saven Technologies

Information Technology Training Services

COMMITMENT TO EXCELLENCE

INFORMATION TECHNOLOGY TRAINING SERVICES

TRAINING LEADER

In this time of rapid change, companies are adopting new technologies that transform industries and redefine markets and their competitive edge. In order to be productive and efficient in these new technical environments, quality technical education is critical. Saven Technologies, Inc. has been recognized as an industry leader in providing technical education, mentoring and consulting services. We feature state of the art training facilities where students use software tools to create custom applications and reports, therefore providing the best possible learning environment for hands-on training.

TEACHING PROVEN PRINCIPLES

Saven's instructors are experienced practitioners who work with the technology tools in live development environments delivering solutions for our clients. Therefore, they provide practical insight that significantly increases the effectiveness of the educational experience. We focus on the teaching of proven principles that lead to success and on imparting the underlying knowledge including the dangers of not following these sound principles.

MENTOR AND PROTEGE

Over the years we have found that working with a mentor in a formalized environment is the most effective way to facilitate the knowledge exchange that will lead to a higher level of practical application. Saven's trained specialists are available to work with each individual on specific projects in a collaborative, development and educational environment. Upon completion of the comprehensive classroom training, we can dedicate one of our senior level consultants to work with your project team to ensure a smooth transition from the classroom into a live working environment. This mentor and protégé knowledge transfer process will accelerate the learning while allowing your staff to remain productive in the development environment.
